R.O.C. D- 1 No. 1199-34

Station Madras, Dated the 28th September 34. 19

From (Name) S.V. Ramamurty, Esq., I.C.S.,

(Designation) Director of Agriculture, Madras.

To The Secretary to the Government of Madras,

Development Department.

Sir,

P. 2 m-por Reference: Government Memorandum No. 2178/
11/34-1, dated the 16th August 1934.

The Deputy Director of Agriculture, VII circle proposed the deputation of a Special Officer to do propaganda work in connection with the growing of green manure crops near reserve forests. But he has been ordered to see that this work forms a part of the

3

2.

work of each demonstrator.

2. The sowing season will start from the month of October and last till the end of February. A report will be sent in April 1935 on the success achieved.

I have the honour to be,

S i r,

Your most obedient servant,

A. C. Z. ...
28/2/35

for DIRECTOR OF AGRICULTURE.

ly

H. M. C₃ pointed out to me yesterday the necessity for doing something in connection with the agitation about green leaf manure S. Kanara. Has any intensive propaganda been done in that Dt. on the subject of growing green manure? Or have we asked the D. of A. to take it up? I remember vaguely that it was represented that you could not grow green manure crops in S. Kanara; but this must be rubbish.

At
9/8

To See

The D. A. has been doing general propaganda work in the presidency on the subject of growing green manure - vide his report -

(A)

at P.P. 17-19 of 80. No. 840 D.A. D. 26-6-1934.

From the report it does not seem that any intensive propaganda work has been done specially in South Kanara District.

We have not so far asked the D. A. to take up the question of intensive propaganda in S. Kanara Dt. Attention is invited to 'N'

(A)

at P. 18 of the 80. The area under green manure in 1932-33 in the VII circle

(Malabar and South Kanara Districts) was

5. 25

1322 ~~acres~~ acres against 1000 acres
in the previous year. The practice of
growing green manure in this circle
is said to be limited by lack of
irrigational facilities

I wonder whether the D. A. will now
be asked to take up the question of
intensive propaganda work in South
Kannara about growing green manure

10-8-34.

S.R.
11-8-34

It is in S. Kannara more than
anywhere else that we require pro-
paganda on these lines; always pro-
vided that it is possible to carry it out
convincingly, because it is there that
the most persistent demands are made
on the Govt.

Copy of letter from the Dy. Director of Agriculture,
VII Circle, Tellicherry, to the Director of Agriculture, Madras,
R.O.C.No.718/34 dated the 17th April 1935.

Green manure cultivation- South Kanara district-
Report on the success achieved. -

Reference:-- Your letter No.D-574/35 dated the 28th March
1935.

During the year, great attention was paid for popularising
green manure crop in South Kanara and it formed one of the main
items of work. The green manure crop chosen was koflinji as it is
capable of resisting drought and immune from cattle damage to a
great extent.

2. Attempts were made to sow kolinji both in single and
double crop paddy lands. In single crop lands kolinji was sown in
October-November after the harvest of first crop of paddy. In
double crop lands it was sown in January-February after the harvest
of second crop of paddy. There is a practice in the district of
sowing pulse crops after the harvest of paddy crop both in single
and double crop wet lands. Attempts were made to sow kolinji both
as a pure and a mixed crop with pulse. So from October to the
middle of March green manure propaganda continued in the district.

3. During this period 14,425 lb. of kolinji seed were sold
to the ryots in different parts of the district. As far as
information is available 620 ryots in 165 villages sowed 592 acres.
Special efforts were made to popularise the crop in the villages
in the neighbourhood of Reserve forests. Although the ryots are
reluctant to undertake this improvement in the interior villages,
especially in the neighbourhood of Reserve forests and Revenue
forests, 116 ryots in 45 villages were persuaded to sow green manure
crop in about 100 acres. Along the coast where there is real
difficulty for green leaf and the soil is more suited for sowing
kolinji the response for this item of improvement is greater.
Sugarcane growers in some of the villages along the coast were
persuaded to grow this crop for manuring their sugarcane.

4. During the year, the seasonal factors were not
favourable to the sowing of green manure crop. On account of the
shortage in the rainfall during the north-east monsoon, there was *

not sufficient moisture in the soil to sow the crop on a larger area. The crop that was sown in single crop lands in the months of October-November, got dried up for want of moisture in the soil. There was a fair amount of cattle damage, especially when the crop was young. The present condition of the standing crop is fair especially in double crop lands and the stunted growth in the single crop area is expected to improve when a few hot weather showers are received.

5. Persistent efforts will be made to push forward this item or improvement in the coming years.

& to Coll. S. Kanara ✓

By a coincidence I was talking
to Mr. Gaine about this green
manure business this morning.
But his idea is that a green
manure is wanted that will
stand up against water logging
in the fall crop season.
